

MASTER FORMULA Metal Sealer Gloss is a glossy protective coating designed to protect your polished metal surfaces from spots, stains, and oxidation for up to one full year.

Until now, most polished metals required constant polishing to maintain their shine. Many people are polishing (aluminum wheels, etc.) every weekend. Classic car and "show bike" owners are often reported as polishing their wheels before and after each and every show.

Our research has shown that excessive polishing with poor polishes degrade your metal's finish. They leave a hazy build-up of bruises and fine scratches that over a period of time will look dull.

Even though our **Metal Gloss Metal Polish** leaves a flawless finish, we at **Master Formula** still believe that excessive polishing is outdated.

Master Formula Metal Sealer Gloss provides an easily maintained, glossy protective coating. When dirty, simply wash, rinse, and wipe off. Also periodically, between polishes, use our **Master Formula Xtreme Gloss Instant Detailer** as an instant tune-up for the extreme gloss.

If your wheels are expensive, we know you want them looking good every day, not just the day they are polished. If so, **Master Formula Metal Sealer Gloss** was formulated for you. It's the quick, simple, easy-to-use solution for the long-lasting look of extreme gloss.
